Store

Laser Notebook mouse with self-retracting cable

The new mouse from DICOTA, Store, has it all inside! The special and practical trick: the USB receiver is located on the bottom side, saving room and being safe during transport. The self-retracting cable-function not only prevents knotted cables, but also allows for easy adjustment of the perfect cable length. With this mechanism, this nifty mouse unifies the advantages of wired and wireless mice at the same time and makes it the perfect companion for travelling.
Thanks to the resolution of 1600 dpi, Store is playing in the highest technical league. An invisible laser beam replaces the common LED sensor and samples the surface up to 20 times more exact. This ensures precise control of the mouse cursor and the mouse is operable on almost any kind of surface. Plug & Play takes care of the installation and the mouse is ready for use in an instant. The rubber coating on the sides of this compact mouse makes for perfect handling during use and underlines the futuristic design of this mouse.

- Embedded self-retracting USB cable
- Invisible laser sensor with 1600 dpi
- Rubber coating
- Plug & Play
- User manual
